

# How to Use

## Initial Setup

- **Place** the “Template\_Generator” Folder in an easy-to-access location.
- **Open** the folder ^^ and **open** the “Setup-First-Time-Only” Folder.
- **Double Click** “Double\_Click\_First” file and **follow** the setup with the already selected options.
- **Double Click** “Double\_Click\_Second” file and **wait till done**.

=====

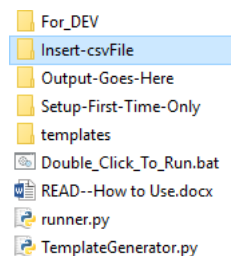

|   | A | B | C | D | E                  |
|---|---|---|---|---|--------------------|
| 1 |   |   |   |   | 6/28/2019-7/5/2019 |

## To Use

- **Try to format** the excel spreadsheet to **follow the format above**. ^^^ (By following this template, more templates will work.)
- **“Save as”** the excel spreadsheet with the name **“input”** with the option **“CSV UTF-8 (Comma delimited) (\*.csv)”** as shown below.

- **Place** the “input.csv” file ^^ in the “Insert-csvFile” Folder. □ □
- **Double Click** the “Double\_Click\_To\_Run” file to **run** and the **created templates** will be in the “Output-Goes-Here” Folder.
- If there is a “READ\_THIS!\_AND\_SEND\_TO\_DEV.txt” file, it contains the **templates** that were **not generated**. (Please send this to DEV)

**PLEASE REPORT ALL BUGS (PROBLEMS WITH THE PROGRAM) TO DEV!!**
